6 people have recommended Rahmal

"Rahmal has a wide range of technical skills that includes a deep background of Ruby on Rails and a understanding of databases and javascript but also brings a good mentoring approach to people he works with. He impressed me from day one with his very honest communication style and, during architectural meetings and daily tech discussions, his knowledge and experience in helping to improve the product."

— **Tom DiGrazia**, *CTO, TripTrace*, managed Rahmal at TripTrace

"Rahmal has a keen way of taking large projects and breaking them down into actionable and easily explainable pieces. I was also always excited to work with him as he knocked out great work."

— **Sergio Rabiela**, *Senior Software Engineer, CashNetUSA*, worked directly with Rahmal at CashNetUSA.com

"Rahmal's enthusiasm for software development is only exceeded by his passion for beautiful code. Working side-by-side with Rahmal can be exhilarating. His wealth of knowledge and experience are invaluable assets to any development team."

— **Donald Hall**, *Sr. Software Engineer, CashNetUSA*, worked directly with Rahmal at CashNetUSA.com

"I've worked with Rahmal across several large scale projects, and I have found much to admire. Rahmal has shown dedication to the ideal of the 'right solution' without sacrificing his focus on time-based deliverables. Rahmal has also shown that he's not a 'toss it over the fence' kind of guy, but rather someone who will devote time to fixing issues identified in what he produces. As a QA Engineer, what more can you ask for in a developer?"

— **Blake Thomas**, *QA Engineer, CashNetUSA*, worked directly with Rahmal at CashNetUSA.com

"Rahmal worked for me at Orbitz on one of my teams developing the booking engine for American Airlines. He was knew to Orbitz and my team and came up to speed fairly quickly. His code was acknowledged by his peers as always being high quality, well written with few defects. He also interacted well with the external client and his peer development group at American Airlines."

— **Brian Wesselman**, *PMP, Director, Orbitz*, managed Rahmal at Orbitz.com

"When I joined the American Airlines Hosting team at Orbitz, Rahmal was leading the development of couple of kiosk functionality projects and over the 2 years that we worked together, I found him to be pleasant to work with and easily approachable for my questions both technical and domain knowledge-related. While leading those projects, he made sure that all the interested parties were engaged and kept up to speed with progress and/or issues. Those interested included the developers and managers of our client, American Airlines, as well as those within Orbitz, and Rahmal managed the communication with great ease. He approaches his development with a keen attention to detail, which is reflected in the quality of his code and in the systems that he builds."

— **ranganathan ganesh**, *Senior Software Engineer, Orbitz Worldwide*, worked directly with Rahmal at Orbitz Worldwide
